E1 Single-Lever Filter

Convenient, high-quality operation, a free maintenance reminder service and a timelessly beautiful design provide for a lifetime of protection and safety.

BWT E1 Single-Lever Filter

Hygienic, convenient, safe.
Water hygiene can be that simple!

On its path from the waterworks to your house, your water may pick up dirt particles such as sand or rust, which then enter into your domestic water system. Such contaminants can cause dripping taps and expensive damage to household appliances. They can also affect drinking water hygiene by providing the optimum breeding ground for germs and bacteria in the pipelines.

With that in mind, a correctly maintained protective water filter is vital to water hygiene and should be fitted as part of the domestic water system in every household. Take no chances and choose the outstanding quality of BWT for your customers by installing the E1 Single-Lever Filter. Furthermore, the integrated pressure reducer helps you reduce the amount of water used by up to a third.

What do you know about water hardness?

More about BWT water-softening systems

The E1 Single-Lever Filter provides the basic protection for mains water installation.

As an addition to the BWT E1 filter, a BWT Perla water-softening system can turn hard water into velvety soft BWT Pearl Water. To protect against limescale throughout your home.
